

CANADA: IN FILM!

If you were tasked with making a movie on Canada's natural geography, how would you do it? What would you include to showcase the natural and physical wonder of our country? How would you do it in a way that was also *interesting*?

The Task:

You will spend the class developing a concept for a film (either fictional or documentary) that highlights Canada's natural and physical features.

You will work in pairs or threes to develop together a list of concepts to include:

- The topics or themes of the major five acts – and descriptions – what will you show? Why?
- Characters, if any
- Actors who would play characters
- Slogan for movie poster

Each group will 'pitch' their movie idea to the class. At the end, the class will discuss the merits of each and select one film as the most promising.

Build into the presentation the things we've been learning about in this unit! Make it come alive...
